

Day- 8 SUMMARY

For Loop :

A for loop is used to repeat a block of code multiple times when the number of iterations is known. It makes programs shorter, cleaner, and easier to manage.

Syntax

for(initialization; condition; increment/decrement)

Example

```
for(int i = 1; i <= 3; i++) {  
    System.out.println(i);  
}
```

Star Pattern :

Star patterns are programs that print shapes using * symbols with the help of nested loops. They are mainly used to improve logical thinking and understanding of loops.

- Outer loop → controls rows
- Inner loop → controls columns/stars

Example

```
for(int i = 1; i <= 3; i++) {  
    for(int j = 1; j <= i; j++) {  
        System.out.print("*");  
    }  
    System.out.println();  
}
```

Output

```
*  
**  
***
```
