

Day - 7 SUMMARY

For Loop :

A for loop is a looping statement used to execute a block of code repeatedly for a specific number of times. It contains initialization, condition checking, and increment/decrement in a single statement. It is mainly used when the number of iterations is known.

Syntax

```
for(initialization; condition; increment/decrement)
{
    // statements
}
```

Example

```
for(int i = 1; i <= 5; i++)
{
    System.out.println(i);
}
```

If Statement Inside For Loop :

An if statement can be used inside a for loop to check a condition during each iteration. Based on the condition, specific statements are executed.

Syntax

```
for(initialization; condition; increment/decrement)
{
    if(condition)
    {
        // statements
    }
}
```

Example

```
for(int i = 1; i <= 10; i++)
{
    if(i % 2 == 0)
    {
        System.out.println(i);
    }
}
```

This program prints only even numbers from 1 to 10.
